Click&Coat®

Versatility in use

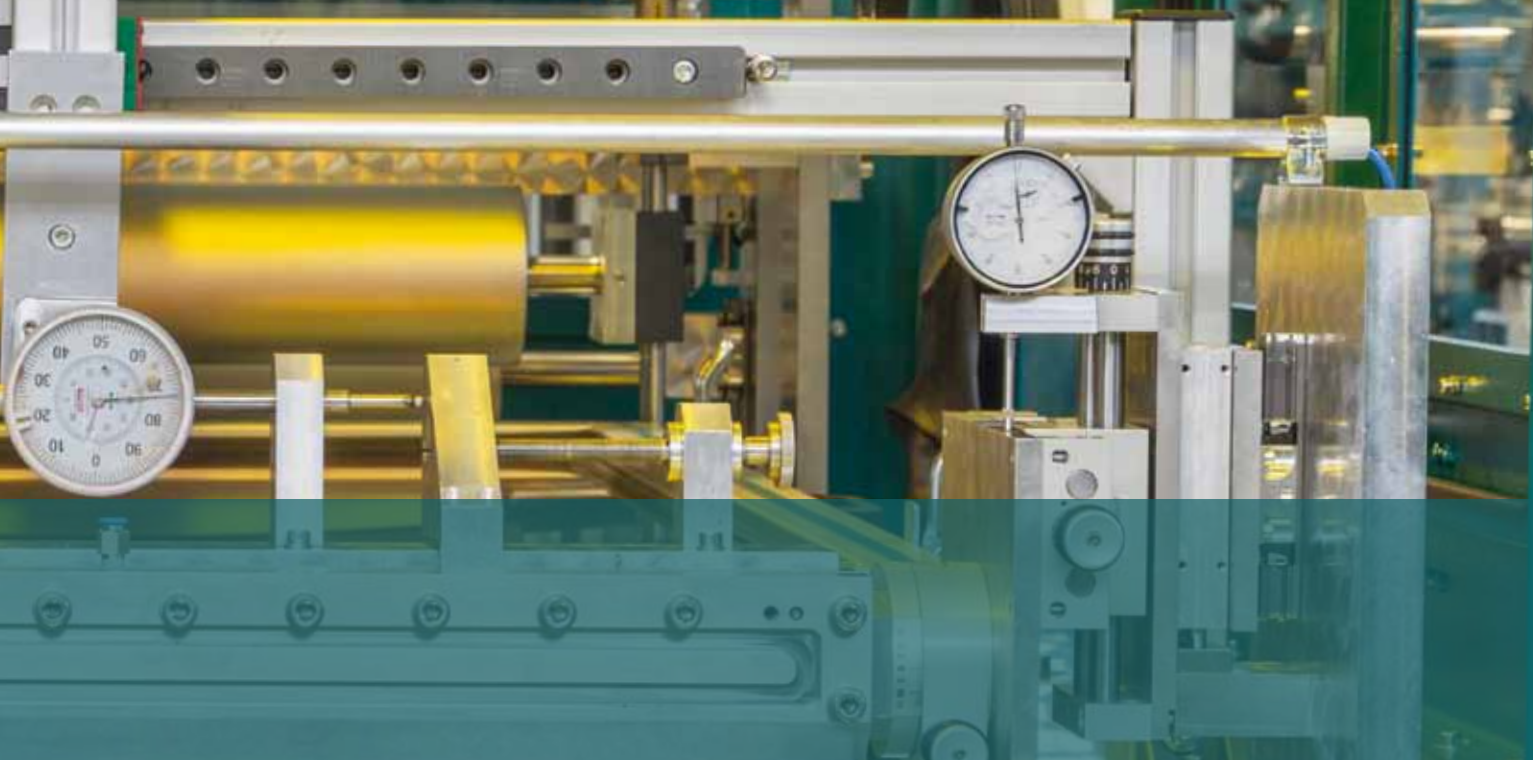

The versatile Coatema Coating Machinery Click&Coat® roll-to-roll substrate processing platform offers the ability to easily add, or exchange, processing modules in a few of minutes.

Initially, a basic Click&Coat® tool might include a coating or printing module, a dryer and a lamination capability in widths from 300 mm to 1,000 mm. Then additional Click&Coat® modules can be easily added, at any time and to almost any extent.

Coatema's international award-winning module-to-module coupling and aligning hardware, combined with a proprietary Siemens S7 PLC software package and efficient three-wire connectors, makes the Click&Coat® concept ideal for expandable laboratory, pilot or production applications.
